

Manage a Feedlot

Handout I I

Checklist for Developing an Environmental Management Programme

Checklist for Developing an Environmental Management Programme

The following checklist may be useful in developing an EMP for the feedlot development.

A. Consider the impact of the feedlot on:

- Water resources
- Bushland areas and Reserves
- Wetlands and waterways
- Water protection areas Consider site contamination or details of previous land uses which may have contaminated the soil

B. Address relevant issues from the following list and identify control measures to address environmental impacts:

- Air quality
- Dust
- Odour
- Noise
- Surface water
- Groundwater
- Wastewater Reuse
- Solid and Liquid waste
- Resource Storage
- Pest Control
- Compressed/Liquid Gas
- Discharges to Land
- Discharges to Surface water
- Discharges to Groundwater

C. Provide information on

- Operating hours
- Timescale for completion of construction works
- Planned timelines for construction and operation
- Site storm water drainage provisions and chemical spill management measures/systems
- Waste management practices
